If you're a dedicated Doctor, Physical or Occupational Therapist, or a Chiropractor, you've seen some amazing technological advances.

Well, hold onto your smock because you're about to be blown away.

Introducing 3-D Joint Rom.

3-D Joint Rom is an amazing new app that will improve your practice and deliver better patient outcomes.

Here's how it works.

You, the Practioner, easily connects the wireless sensor to your patient's neck, ankle, wrist, elbow, hip, or knee.

Using your iPad, you measure the angles of movement.

What occurs is very specific movement analysis which tracks 3-D motion in milliseconds and detects nuances of motion that are sent to a database for evaluation.

At home, the patient also uses a sensor that monitors exercise activity and sends data to the cloud for review by the Practioner to track progress.

All these functions are consolidated into one wireless, mobile platform that saves the doctor, and patient time, and helps create better outcomes!

Put 3D Joint Rom to work in your practice, right now.
